---

## Professional Summary

Senior Full-Stack Developer with 4+ years of experience in designing and developing scalable applications. Expertise in both front-end and back-end technologies, passionate about advancing society through innovative custom solutions.

---

## Experience

### Sr. Software Engineer

**Sopra Steria, Bangalore**

**(Aug 2022–present)**

- Collaborated directly with Airbus on-site, developing full-stack applications to meet user and business requirements.
- Worked on SYNDEO, a legacy project for organizing production files based on aircraft family.
- Worked on PSC, product structure computation to ease decisions for aircrafts using older docs and boost production speed.
- Managed incidents via Service Now and Improved the e-learning dashboard to enhance application usability.
- Created software documentation (SD) and contributed to Application Requirement Documents.
- Utilized the SAFE methodology and led team training on application, language, and project fundamentals.

### Sr. Angular Developer

**Oodles Technologies, Gurgaon**

**(Jul 2021–Aug 2022)**

- Developed and enhanced Oodles Dashboard, an ERP platform streamlining workflows including task management, BU-wise resource allocation, lead tracking, finance management, and profit/loss analysis based on developer cost metrics.
- Developed and integrated new features for applicant resourcing and interview processes within the Oodles Dashboard.
- Integrated multiple APIs for content-rich websites while implementing best practices for performance & scalability.
- Implemented 27 dynamic views on a single page, managing complex data display and cost estimations utilizing RxJS Library.
- Collaborated with cross-functional teams to understand business requirements and deliver impactful solutions.
- Improved load time by 30% and engagement by 20% using RxJS for data broadcasting and low resolution images.

### Associate IT Consultant

**ITC Infotech, Bangalore**

**(Dec 2017–Jan 2019)**

- Enhanced core UI components, including login and dashboards, for a data-driven IoT application.
  - Engineered data visualization solutions using JSON, tabular formats, and charting libraries (jscharts, amcharts).
  - Implemented dynamic data visualizations using EarthJS for interactive maps.
  - Designed and developed initial UI elements, demonstrating adaptability and design proficiency in a fast-paced environment.
- 

## Education
